

Clean Copy of Appealed Claims

1 - 31. (CANCELLED)

32. The clothing apparel of claim 65 further comprising a memory arranged to hold data associated with images, said control member being coupled to said memory to receive said data to generate said electrical signals.

33. The clothing apparel of claim 65 further comprising a securing member arranged to secure said panel on the body of said person.

34. The clothing apparel of claim 65 wherein said electronic display is integrally incorporated into said panel.

35. (CANCELLED).

36. The clothing apparel of claim 65 wherein said electronic display is constructed to and arranged to show color images in response to said electrical signals.

37. The clothing apparel of claim 65 wherein said control member generates electrical signals defining a static image on said electronic display.

38. The clothing apparel of claim 65 wherein said control member generates electrical signals defining a dynamic image on said electronic display.

39. The clothing apparel of claim 65 further comprising a memory arranged to store several images, and a selection member coupled to said control member to select one of said images for display by said electronic display.

40. The clothing apparel of claim 65 wherein said control member generates signals defining a monochromatic image on said electronic display.

41. The clothing apparel of claim 40 wherein said monochromatic image is a uniform color.

42. The clothing apparel of claim 40 wherein said control member generates signals defining an image composed of alphanumeric characters.

43. The clothing apparel of claim 65 wherein said panel is sized and arranged to form part of a vest.

44. The clothing apparel of claim 65 wherein said panel is sized and arranged to form part of a shirt.

45. The clothing apparel of claim 65 wherein said panel is sized and arranged to form part of a cap.

46. The clothing apparel of claim 65 wherein said panel is sized and arranged form part of a tie.

47. The clothing apparel of claim 65 wherein said panel is sized and arranged to form a part of a pair of suspenders.

48. The clothing apparel of claim 65 wherein said panel is sized and arranged to form a part of a belt.

49. (CANCELLED).

50. (CANCELLED).

51. The apparel of claim 67 further comprising a memory storing data defining said image.

52. The apparel of claim 51 wherein said memory is replaceable.

53. The apparel of claim 51 wherein said memory is arranged to hold data corresponding to several images and wherein said controller includes an image selector for selecting one of said images to be displayed.

54. The apparel of claim 53 wherein said image selector includes a timer to generate a timing signal and wherein said electronic display shows images in accordance with the said timing signal.

55. The apparel of claim 53 wherein said image selector includes a keyboard for identifying an image to be displayed.

56. The apparel of claim 67 wherein said display images formed of alphanumeric characters.

57. The apparel of claim 56 further comprising a message selector cooperating with controller to select a message defined by said alphanumeric characters.

58. The apparel of claim 57 wherein said message selector includes a keyboard for entering said alphanumeric characters.

59. The apparel of claim 57 wherein said message selector includes an interface receiving external signals from an external device, said external signals defining said message.

60. Apparel for a wearer comprising:
a clothing article including an integral panel forming an electronic display, said panel having fabric-like characteristics and being made of a layer of a light emitting polymer disposed on a layer of fabric; and
a control member coupled to said electronic display and arranged to generate signals corresponding to images shown on said electronic display.

61. (CANCELLED).

62. Apparatus for playing a war game comprising:
a clothing article constructed to be worn by a participant in said war game;
a flexible display formed on said clothing article of a light emitting layer formed of a light emitting polymer and a base formed of a layer of fabric, said flexible display having fabric-like characteristics to conform to the body of the participant like a fabric and arranged to display selectively one of a plurality of images;
a controller generating signals for said display, said signals defining said images;
and

a gun coupled to said controller, said gun generating a beam when activated by said participant.

63. (CANCELLED).

64. The apparatus of claim 62 further comprising a sensor sensing hits on said participants from other participants.

65. A clothing apparel to be worn by a person, comprising:
a panel with an electronic display formed of a base of fabric and a layer of light emitting polymer material that generates light to define an image in response to electrical signals; and
a control member selectively generating said electrical signals.

66. The clothing apparel of claim 65 wherein said electronic display includes a protective layer on top of said layer of light emitting polymer material, said protective layer being made of one of a transparent and translucent material.

67. Apparel for a wearer comprising:
a clothing article constructed and arranged to be worn on the body of said wearer, said clothing article including a panel;

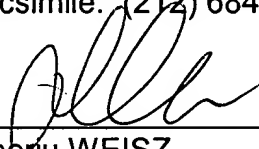

an electronic display incorporated into panel, said panel including said electronic display having fabric-like characteristics, said electronic display being formed of a base layer made of woven, non-woven or knitted fabric and a layer of a light emitting polymer that generate an image in response to electrical signals; and

a control member coupled to said electronic display and arranged to generate said signals.

It is respectfully submitted that the claims of the subject application are not obvious over the references of record and therefore the Examiner's rejections should be reversed.

Respectfully submitted,
